PROFILE

Software Engineer with a focus on building scalable Android applications and robust backend systems. Experienced in taking products from concept to production, including a B2B application currently in closed testing on Google Play. Proficient in Java, Kotlin, and Spring Boot, with a passion for clean architecture and system optimization. I am now completing my final internship in AI integration and system optimization, and I am eager to apply my rigorous, quality-driven approach to a professional development team.

EDUCATION

University of Montpellier

Master's Degree in Software Engineering

Montpellier, France

Sept. 2024 – July 2026 (Expected)

University of Montpellier (IAE)

Master's Degree in Technology and Science Management (Double Degree)

Montpellier, France

Sept. 2024 – July 2026 (Expected)

University of Science and Technology Houari Boumediene (USTHB)

Master 1 in Big Data Analytics

Algiers, Algeria

Sept. 2023 – June 2024

University of Science and Technology Houari Boumediene (USTHB)

Bachelor's Degree in Computer Science

Algiers, Algeria

Sept. 2020 – June 2023

EXPERIENCE

Mobile AI Software Engineer Intern

Feb. 2026 – July 2026 (Expected)

AI-Stroke

Montpellier, France

- Selected as the sole Android engineer to contribute to the migration of a research computer-vision assessment system from a Windows/Python environment to mobile platforms, primarily Android, with exposure to iOS in the internship scope
- Designing the Android application architecture using Kotlin, MVVM, and Coroutines for a real-time mobile evaluation workflow, and implementing tests to ensure application quality
- Optimizing on-device computer-vision inference components for mobile deployment

Software Engineer Intern

Feb. 2023 – June 2023

ATM Mobilis

Algiers, Algeria

- Developed a full-stack document management system using Spring Boot and Android to streamline internal HR workflows
- Implemented real-time messaging features using WebSockets and Firebase Cloud Messaging
- Designed secure REST APIs with JWT-based authentication

PROJECTS

Safek – Digital Queue Management Platform | *Kotlin, Jetpack Compose, Spring Boot, PostgreSQL, Redis, STOMP/WebSocket*

- Shipped a production B2B platform currently in closed test on Google Play; full lifecycle ownership across design, Android owner app, Spring Boot backend, customer-facing PWA, and Play Store delivery
- Built the Android client with Kotlin, Jetpack Compose, MVVM, Hilt, Room, and STOMP-over-WebSocket (krossbow) for real-time queue events between owners and customers
- Architected the backend on Spring Boot with PostgreSQL, JWT authentication, and Redis pub/sub for cross-instance event fan-out; deployed on Railway with Cloudflare Workers fronting the PWA

Stage-Connect Internship Platform | *Kotlin, Jetpack Compose, Spring Boot 3, WebSockets, JWT*

- Built a full-stack internship management platform connecting students, recruiters, and educational institutions
- Implemented role-based access control and secured REST APIs using JWT authentication
- Applied Clean Architecture with MVVM, Hilt, and Retrofit, and integrated real-time messaging using STOMP WebSockets and Firebase Cloud Messaging

Distributed E-Commerce Ecosystem | *Java 17, Spring Boot, Kafka, Resilience4j, Keycloak*

- Designed a fault-tolerant microservices architecture using Spring Cloud Gateway, Keycloak, and Resilience4j
- Combined synchronous service communication with OpenFeign and asynchronous event-driven messaging with Apache Kafka
- Integrated service discovery, centralized configuration, and distributed tracing using Eureka, Spring Cloud Config, and Zipkin

Distributed User Profiling and Observability Engine | *OpenTelemetry, Zipkin, MongoDB*

- Built a user profiling backend that classifies behavior patterns and stores structured profiles in MongoDB
- Used OpenTelemetry and Zipkin to trace requests and improve observability

Mail-Management Platform | *Java, Android SDK, Spring Boot, RxJava, WebSockets, FCM*

- Built a full-stack internal mail and document management platform for ATM Mobilis
- Developed the Android client using Java, XML layouts, MVVM, and RxJava
- Secured the backend with JWT authentication and integrated real-time updates and push notifications

TECHNICAL SKILLS

Languages: Java, Kotlin, C++, Python

Mobile: Android SDK, Jetpack Compose, Kotlin Flow, RxJava, Hilt/Dagger, Room, JNI, MediaPipe, TensorFlow Lite

Backend: Spring Boot, Hibernate/JPA, Spring Security, Apache Kafka, gRPC, GraphQL

Databases: PostgreSQL, MongoDB, Redis, SQLite, Firebase Realtime Database

Tools & Practices: Git, Maven, Docker, JUnit 5, Mockito, Espresso, CI/CD, Agile/Scrum

Core Concepts: System Design, Algorithms and Data Structures, Design Patterns, Clean Architecture
