Available full-time starting August 2026

PROFILE

Software Engineer with hands-on experience shipping production applications, backend systems, and modern application architectures. Skilled in building clean and maintainable systems using Java, Kotlin, and Spring Boot, including a B2B product live on Google Play, with a strong interest in scalable product engineering.

EDUCATION

University of Montpellier <i>Master's Degree in Software Engineering</i>	Montpellier, France Sept. 2024 – July 2026
University of Montpellier (IAE) <i>Master's Degree in Technology and Science Management (Double Degree)</i>	Montpellier, France Sept. 2024 – July 2026
University of Science and Technology Houari Boumediene (USTHB) <i>Master 1 in Big Data Analytics</i>	Algiers, Algeria Sept. 2023 – June 2024
University of Science and Technology Houari Boumediene (USTHB) <i>Bachelor's Degree in Computer Science</i>	Algiers, Algeria Sept. 2020 – June 2023

EXPERIENCE

Mobile AI Software Engineer Intern – Design of a Reproducible Video-Audio-AI Pipeline <i>AI-Stroke</i>	Feb. 2026 – July 2026 Montpellier, France
– Selected as the sole Android engineer to contribute to the migration of a research computer-vision assessment system from a Windows/Python environment to mobile platforms – Designed and developed a deterministic Android-based video, audio, and AI processing pipeline, optimized for smooth performance across diverse, heterogeneous hardware configurations – Optimized on-device computer-vision inference components for mobile deployment – Technologies & Tools: Kotlin, Android SDK, Python, Coroutines, Dagger/Hilt, MediaPipe, TensorFlow Lite, Spring Boot, Microsoft Teams	
Software Engineer Intern – Full-Stack Document Management System <i>ATM Mobilis</i>	Feb. 2023 – June 2023 Algiers, Algeria
– Developed a full-stack Android application using Java and Spring Boot for document and employee management – Implemented real-time messaging features using WebSockets and Firebase Cloud Messaging – Designed secure REST APIs with JWT-based authentication – Technologies & Tools: Java, XML, Android SDK, Spring Boot, Spring Security, WebSockets, Firebase	

PROJECTS

Safek – Digital Queue Management Platform <i>Kotlin, Jetpack Compose, Spring Boot, PostgreSQL, Redis, STOMP/WebSocket</i>
– Shipped a production B2B platform live on Google Play; full lifecycle ownership across design, Android owner app, Spring Boot backend, customer-facing PWA, and Play Store delivery – Built the Android client with Kotlin, Jetpack Compose, MVVM, Hilt, Room, and STOMP-over-WebSocket (crossbow) for real-time queue events between owners and customers – Architected the backend on Spring Boot with PostgreSQL, JWT authentication, and Redis pub/sub for cross-instance event fan-out; deployed on Railway with Cloudflare Workers fronting the PWA
Stage-Connect Internship Platform <i>Kotlin, Jetpack Compose, Spring Boot 3, WebSockets, JWT</i>
– Built a full-stack internship management platform connecting students, recruiters, and educational institutions – Implemented role-based access control and secured REST APIs using JWT authentication – Applied Clean Architecture with MVVM, Hilt, Retrofit, and integrated real-time messaging using STOMP WebSockets and FCM
Distributed E-Commerce Ecosystem <i>Java 17, Spring Boot, Kafka, Resilience4j, Keycloak</i>
– Designed a fault-tolerant microservices architecture using Spring Cloud Gateway, Keycloak, and Resilience4j – Combined synchronous service communication with OpenFeign and asynchronous event-driven messaging with Apache Kafka – Integrated service discovery, centralized configuration, and distributed tracing using Eureka, Spring Cloud Config, and Zipkin
Distributed User Profiling and Observability Engine <i>OpenTelemetry, Zipkin, MongoDB</i>
– Built a user profiling backend that classifies behavior patterns and stores structured profiles in MongoDB – Used OpenTelemetry and Zipkin to trace requests and improve observability
Mail-Management Platform <i>Java, Android SDK, Spring Boot, RxJava, WebSockets, FCM</i>
– Built a full-stack internal mail and document management platform for ATM Mobilis – Developed the Android client using Java, XML layouts, MVVM, and RxJava – Secured the backend with JWT authentication and integrated real-time updates and push notifications

TECHNICAL SKILLS

Languages: Java, Kotlin, C++, Python, TypeScript	Web: Angular
Mobile: Android SDK, Jetpack Compose, Kotlin Flow, RxJava, Hilt/Dagger, Room, JNI, MediaPipe, TensorFlow Lite	
Backend: Spring Boot, Hibernate/JPA, Spring Security, Apache Kafka, REST, SOAP, gRPC, GraphQL	
Databases: PostgreSQL, MongoDB, Oracle (PL/SQL), Redis, SQLite, Firebase	
Cloud, DevOps & Tools: AWS, Git, GitLab, Docker, CI/CD, Maven, Jira, Agile Methodology	
Core Concepts: System Design, Algorithms and Data Structures, Design Patterns, Clean Architecture, Unit & Functional Testing
